International  
Conference

ISfTeH International Society for  
Telemedicine & eHealth

## Cyber Intelligence

... and then what ??

- 👉 Why so much?
- 👉 Don't stop half way
- 👉 Making *intelligence* intelligent
- 👉 Keep it. You never know !!!
- 👉 Share it. You'll be amazed !!!

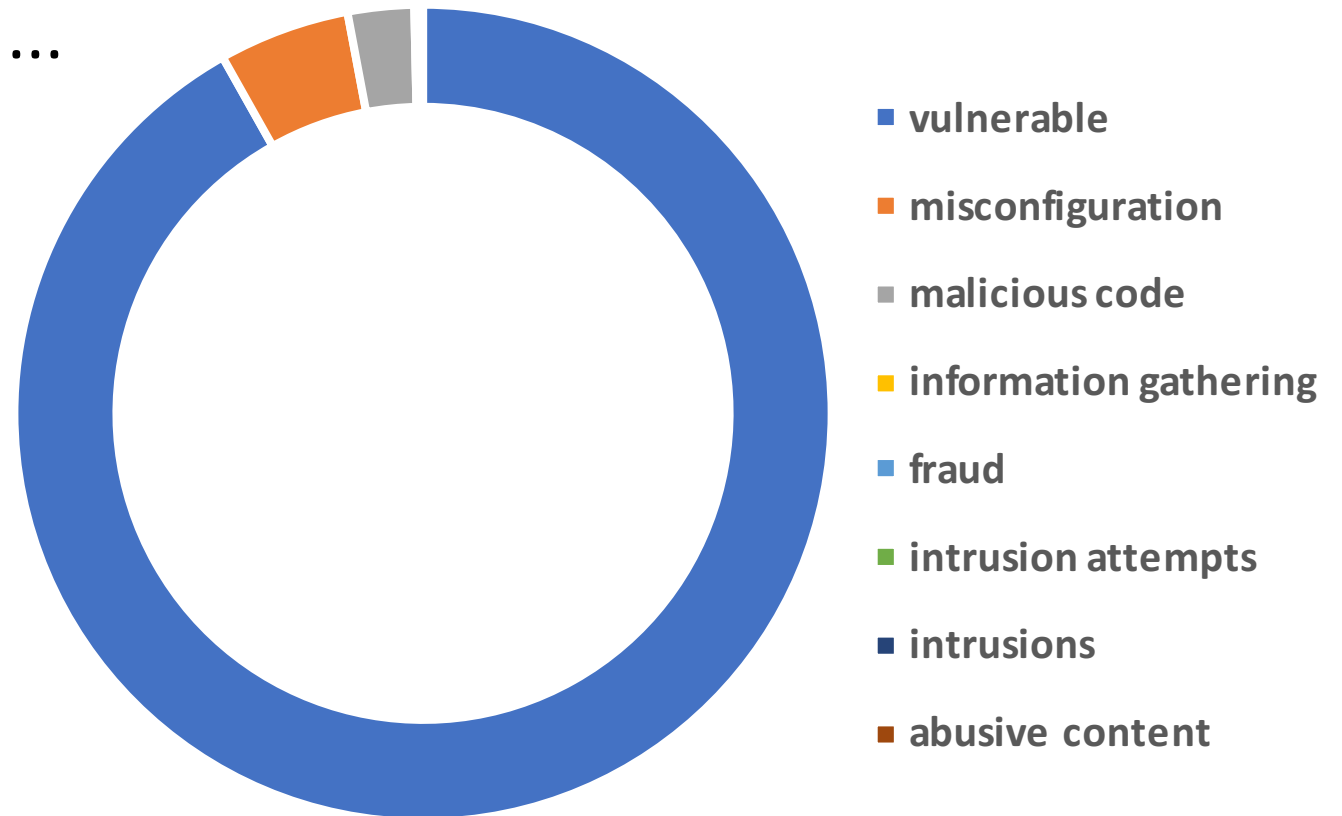

👉 Because people and systems do “stuff” every day ...

👉 ... and someone is seeing that ...

👉 ... who then interprets it ...

👉 ... sometimes catalogues it ...

👉 ... and finally shares it

👉 This means we should also **collect** it

👉 ... and give it a **context** ...

👉 ... apply **human / technical** resources ...

👉 also **share** it ...

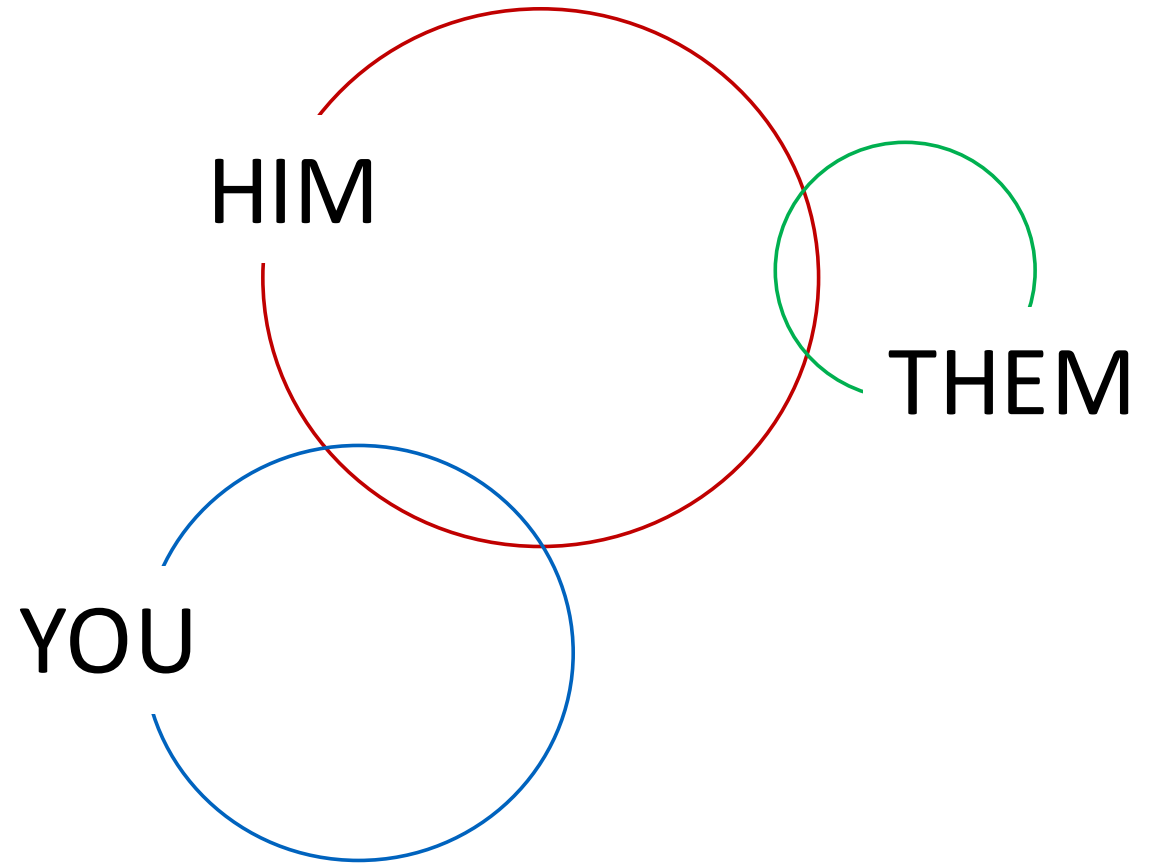

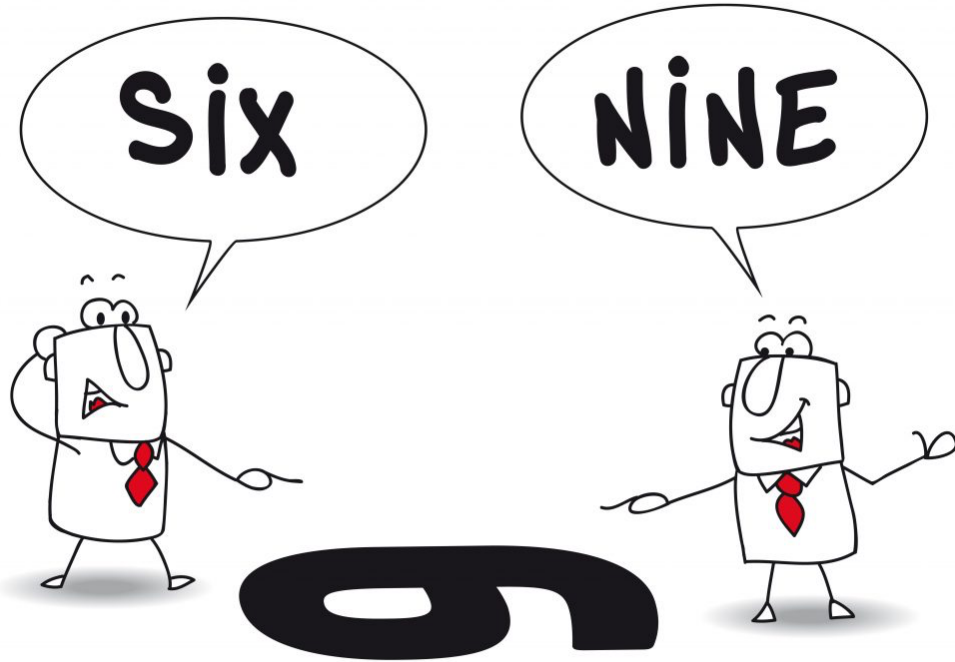

👉 ... and **learn** about ourselves  
in that process

- What activity are we seeing?
- What threats should I look for on my networks and systems and why?
- Where has this threat been seen?
- What does it do?
- What weaknesses does this threat exploit?
- Why does it do this?
- Who is responsible for this threat?
- What can I do about it?

👉 So ... with whom shall we (do we) share?

## Keep in mind:

### Different

- Backgrounds
- Organizational models and Objectives
- Societal perspective (risk, impact, threat, actor)
- (Personal) motivations
- “Language”

### Common

- Seeking Security
- Exposure to cyber threats

Share it. You'll be amazed !!!
